

Written Hazard Communication Program

Per OSHA Regulations: 29 CFR 1910.1200

GENERAL INFORMATION

In order to comply with 29 CFR 1910.1200, "Hazard Communicatio	n", the following written
Hazard Communication Program has been established for (company)	
All work units of the company are included	within this program. The
written program will be available in the (location)	for review
by any interested employee.	

CONTAINER LABELING

Empty containers, typically containing only a residue of the previous lading, are routinely received for reprocessing. Many of the chemicals appearing as container residues are regulated as hazardous materials by the U.S. Department of Transportation. Under the DOT Hazardous Materials Regulations, containers for shipping regulated hazardous chemicals are labeled for hazard communication purposes. Emptied containers with residues of hazmats are typically received for reprocessing with the "hazcom" labels still affixed.

For hazardous chemical inventories stored and used on-site in production processes (e.g. cleaning agents), hazcom labels or markings are displayed (including contents, appropriate hazard warning and manufacturer).

Any hazardous waste produced on-site is regulated pursuant to the Resource Conservation and Recovery Act and EPA's implementing regulations.

MATERIAL SAFETY DATA SHEETS

(Employee and/or position)	is responsible for
maintaining the MSDS system for the company.	
MSDS sheets for all chemicals encountered in the workplace are limmediately accessible to employees through (check if applicable):	kept up-to-date and are
hard copy files kept in the administrative office, with the file	e clearly labeled, and/or
an "800" 24-hour Fax-on-Demand subscription service, whe posted in work areas, on bulletin boards and on the work-are The name of the company offering the MSDS service is and its "800" number is	a phones themselves.
If an MSDS is not available for whatever reason, employees are instructional workplace exposure emergency to contact immediately "911" (or local Points)	
EMPLOYEE TRAINING AND INFORMATION	
(Employee and/or position)employee training in hazard communication and will ensure that all elecarried out.	is responsible for ments specified here are
Prior to starting work, each new employee attends a health and safe information on:	ety orientation, receiving
An overview of the Hazard Communication Standard;	
Chemicals encountered in the workplace;	
Potential physical and health effects of workplace chemicals;	
Methods to determine unintended releases of chemicals;	
Methods to limit personal exposure through workplace practice protective apparel and equipment;	es and/or personal
Steps to take in the event of a medical emergency resulting form a ch	nemical exposure;
How to read labels for hazard information, and MSDS sheets for hazaid information;	zard and emergency

Location and/or means of access to MSDS information;

Steps the company has taken to minimize the potential for exposure risk; and

The location and availability of this written program.

After the training/orientation, each employee signs a form to verify completion of the training and the date of training (optional, but recommended by the Reusable Industrial Packaging Association). Whenever a new chemical is introduced into the workplace, those employees that may encounter the chemical are immediately instructed in the above issues relating to the new chemical.

LIST OF CHEMICALS

Following is a list of chemicals routinely or occasionally encountered in the workplace as residues in otherwise empty containers, or as inventory of process agents:
